Innovative KODAK RVG 6500 Sensor Marries Wi-Fi Compatibility with Best-in-Class Dental Image Quality

New Sensor Extends Company's Leadership Position in Sensor Design

Stuttgart, Germany, November 16, 2009 — Continuing its history of innovative technology, Carestream Health's Dental Systems Group is showing its first Wi-Fi enabled x-ray sensor at the BDTA Dental Showcase in Birmingham, UK and at the ADF in Paris this month. Delivering exceptional image resolution of 20 line pairs per millimeter, the KODAK RVG 6500 Sensor provides dental professionals with unprecedented flexibility and mobility—given the sensor's ability to easily move from one operatory to another.

"We developed the market's first Wi-Fi sensor that delivers best-in-class intraoral image quality and resolution," said Ed Shellard, DMD, Chief Marketing Officer and Director of Business Development, Dental Systems Group, Carestream Health, Inc. "Our RVG 6500 Sensor also provides unmatched portability—supporting multi-operatory practices with the convenience of a cable-free setup."

Since there is no wired connection between the sensor and PC, cumbersome cables are eliminated and patient comfort will be improved. The sensor's compact design facilitates integration and use wherever it is needed in the practice. With Wi-Fi technology, image transfer is both fast and secure, and images can be accessed immediately.

"The RVG 6500 Sensor provides superior mobility," said Dr. Francis Pailler, Montélimar (France). "There's no bulky cable between the chair and the computer, so I have complete freedom of movement. And the 6500's image quality is excellent, much better than the quality from my previous sensors".

The new sensor will work flawlessly with any PC. And for even greater portability and convenience, it is the first dental radiography system to be compatible with Apple iPhone and iPod touch platforms. Customers are able to download the RVG mobile application from Apple's App Store—enabling them to easily acquire, view, adjust and store images directly on their iPod or iPhone with just a tap of the iPhone/iPod touch screen. Image enhancement can be processed directly on the iPod/iPhone to optimize image quality, and a transfer application also allows images to be downloaded from an iPod or iPhone to a PC.

Intelligent Positioning System: The Right Image the First Time

A unique Intelligent Positioning System, to be available as an option for the KODAK RVG 6500 System in early 2010, will enable users to accurately align the sensor to get the right shot each and every time. The system guides the operator during positioning and displays when perfect alignment has been achieved. It minimizes the risk of cone cuts, missed apices, angulations errors and most other alignment mistakes—all without the need for cumbersome positioning devices.

The RVG 6500 System will be available for purchase in most countries in Europe, Africa and Middle East by the end of November 2009. For more information, please visit: www.kodakdental.com.
